

Faith Alliance for
Climate Solutions

Benchmark your carbon footprint today!

FACS' Net Zero track of its Tree of Life program encourages faith communities to set a reduction goal by benchmarking their carbon footprint. Our partnership with the Sustainable Energy, Equity and Knowledge-sharing (SEEK) project allows faith communities to set up a Portfolio Manager account with FREE assistance from a trained Arizona State University student.

EPA's free, online ENERGY STAR Portfolio Manager tool helps faith communities:

- Monitor and reduce energy use.
- Reduce energy costs, allowing more to invest in ministry and mission of service.
- Become a community role model of stewardship.
- Reduce their carbon footprint.

OUR GOAL:
25 faith communities sign
up and complete their
benchmark by Earth Day.
